BIRDS PROTECTED BY FEDERAL LAW

By Frederick C. Lincoln, Biologist 1/
Office of the Director

THE CONVENTIONS

The Convention between the United States and Great Britain for the protection of migratory birds in the United States and Canada was signed at Washington, D. C., on August 16, 1916. The plenipotentiaries signing this document were American Secretary of State Robert Lansing, and British Ambassador Cecil Spring Rice. Ratifications of the two countries were exchanged on December 7, and the Convention was proclaimed by President Wilson on December 8, 1916.

To give effect to this Convention, Congress passed the Migratory Bird Treaty Act which was approved on July 3, 1918. The constitutionality of the Treaty and of this Act was upheld by the Supreme Court in a decision rendered on April 19, 1920. An Act of the Canadian Parliament approved August 29, 1917 gave full effect to the Convention in Canada and this was upheld by the Supreme Court of Prince Edward Island at the Michaelmas term in 1920.

1/ As a member of the Committee on Classification and Nomenclature of the American Ornithologists' Union, the author has had access to the material collected by that agency. Also in an effort to assure the greatest possible accuracy, the list has been examined by Dr. Clarence Cottam, Assistant Director, and by Dr. John W. Aldrich, Chief, Section of Distribution and Migration of Birds. The legal questions involved have been checked by Donald J. Chaney, Chief Counsel.

JUN 5 1952
U.S. DEPARTMENT OF AGRICULTURE

The Convention between the United States of America and the United Mexican States for the protection of migratory birds and game mammals was signed at Mexico City on February 7, 1936, the plenipotentiaries being Ambassador Josephus Daniels and Mexican General Eduardo Hay. This Convention was duly ratified by the participating countries and the ratifications were exchanged in Washington, D. C. on March 15, 1937. It was proclaimed by President Roosevelt on the same day. To cover the additional provisions of this Convention, the Migratory Bird Treaty Act was amended by an Act of Congress approved on June 20, 1936.

Article I of the Convention with Great Britain provides that: "The high contracting powers declare that the migratory birds included in the terms of this convention shall be as follows:

1. Migratory game birds:

   (a) Anatidae or waterfowl, including brant, wild ducks, geese, and swans.

   (b) Gruidae or cranes, including little brown, sandhill and whooping cranes.

   (c) Rallidae or rails, including coots, gallinules, and sora and other rails.

   (d) Limicolae or shorebirds, including avocets, curlews, dowitchers, godwits, knots, oyster catchers, phalaropes, plovers, sandpipers, snipe, stilts, surf birds, turnstones, willet, woodcock, and yellowlegs.

   (e) Columbidae or pigeons, including doves and wild pigeons.

2. Migratory insectivorous birds: Bobolinks, catbirds, chickadees, cuckoos, flickers, flycatchers, grosbeaks, humming birds, kinglets, martins, meadowlarks, nighthawks or bull-bats, nut-hatches, orioles, robins, shrikes, swallows, swifts, tanagers, titmice, thrushes, vireos, warblers, wax-wings, whippoorwills, woodpeckers, and wrens, and all other perching birds which feed entirely or chiefly on insects.

3. Other migratory nongame birds: Auks, auklets, bitterns, fulmars, gannets, grebes, guillemots, gulls, herons, jaegers, loons, murres, petrels, puffins, shearwaters, and terns."

On the basis of this pronouncement the Secretary of Agriculture adopted regulations which were approved by the President. These provided open seasons, bag limits, and other features to govern the hunting of some of the game species, and to regulate the taking, for any purpose, of the migratory insectivorous and other nongame birds. In connection with this last, a list was prepared of the species considered as coming under the protection of the Federal law. 1/

This list, known as "Report of Migratory Birds and Their Eggs Taken for Scientific Purposes" (Form 3-430a), is well known to the holders of scientific collecting permits, who each year use it in reporting to the Service the specimens of the various species that they have taken and exchanged.

Article IV of the Convention with Mexico states that: "The high contracting parties declare that for the purpose of the present convention the following birds shall be considered migratory:

Migratory game birds:

Familia Anatidae
Familia Gruidae
Familia Rallidae
Familia Charadriidae
Familia Scolopacidae
Familia Recurvirostridae
Familia Phalaropodidae
Familia Columbidae

Migratory nongame birds:

Familia Cuculidae
Familia Caprimulgidae
Familia Micropodidae
Familia Trochilidae
Familia Picidae
Familia Tyrannidae
Familia Alaudidae

Migratory nongame birds (Cont.):

Familia Hirundinidae
Familia Paridae
Familia Certhiidae
Familia Troglodytidae
Familia Turdidae
Familia Mimidae
Familia Sylviidae
Familia Motacillidae
Familia Bombycillidae
Familia Ptilogonatidae
Familia Laniidae
Familia Vireonidae
Familia Compsothlypidae
Familia Icteridae
Familia Thraupidae
Familia Fringillidae

1/ Under the provisions of the Reorganization Act of April 3, 1939 and Reorganization Plan No. II, of May 9, 1939, the Bureau of Biological Survey, of the Department of Agriculture, and the Bureau of Fisheries, of the Department of Commerce, were transferred to the Department of the Interior, effective July 1, 1939. This had the effect of transferring to the Secretary of the Interior, wildlife functions that were formerly those of the Secretary of Agriculture. Under the provisions of Reorganization Plan No. III, of April 2,1940, the two bureaus were consolidated to form the Fish and Wildlife Service.

Others which the Presidents of the United States of America and the United Mexican States may determine by common agreement."

Following ratification of this later Convention the list of protected birds underwent a major revision with the addition of many species that were thus brought under Federal administration. The language of the first part of Article IV of the Mexican Convention should be carefully noted since it clearly indicates that any species (or one of its subspecies) that is a member of one of the named Families and that is found in both Mexico and the United States, is under the protection of the Migratory Bird Treaty Act. The question as to whether it is migratory in fact is immaterial. This view was upheld in a Federal Court decision rendered at Brunswick, Georgia on March 14, 1949 in the cases of several hunters who were accused of hunting Clapper Rails by a method that is prohibited under the Federal Regulations.

OTHER FEDERAL LAWS PROTECTING OTHER BIRDS

In 1924 Congress passed "An Act to establish an Alaska Game Commission" (approved January 13, 1925). This law provides wildlife protection in the Territory of Alaska in a manner similar to that provided by the laws of the several States. Both game and nongame birds are defined, the former including those named in the Migratory Bird Treaty Act and in addition, the several species of grouse and ptarmigan, while the nongame species include: "All wild birds except game birds."

Section 9 of this Act authorizes and directs the Secretary of the Interior to adopt regulations that will govern the taking of "game animals, fur animals, game birds, nongame birds, and nests and eggs of birds, and game fishes" in Alaska. Under the regulations currently in force no protection is accorded crows, hawks, owls, eagles, ravens, magpies, and cormorants, and their nests and eggs.

The birds of prey, although (with very few exceptions) well deserving the protection of the Federal Government, are not mentioned in either of the two action conventions currently in effect. As a result, the Bald Eagle, adopted in 1782 by the Continental Congress as our national symbol, has been subjected to unwarranted persecution and charges of predation upon livestock and other human interests. To accord this bird its proper status, Congress passed the Protection of the Bald Eagle Act which was approved on June 8, 1940. This Act specifically excepts the Bald Eagles in Alaska from protection.

LIST OF PROTECTED SPECIES

Knowledge of the distribution and migration of American birds has continued to advance. Also, as the birds themselves have increased or decreased in numbers - frequently because of man-made changes in their habitats - their ranges have been expanded or restricted. For example, the Laughing Gull was not included in the original list as it was not then found in Canada. It has, however, been steadily extending its range to the northward and at least two breeding colonies are now known to be flourishing in the Province of Nova Scotia. This also is true of the Tufted Titmouse which is now found regularly in the southern part of eastern Canada.

On the basis of a critical study of the ranges of all North American birds coming within the scope of the two Conventions and of Federal Court decisions in support thereof, a revised list of the species now considered as under the protection of the Migratory Bird Treaty Act, has been prepared. When a species is named, it includes all of its sub-species or geographic races.

Included in this list are the additional species that are protected only in Alaska. These are so designated by an asterisk (*).

The names used are chiefly those that have been accepted by the Committee on Classification and Nomenclature of the American Ornithologists' Union and which will appear in the fifth edition of the Check-List of North American Birds. Where important changes have been made in the common names, the old name (A.O.U.Check-List, 1931 ed.) is given in parenthesis.

The list is here presented for the information and guidance of all those concerned:

A.O.U. No.	Common Name
	Loons:
7	Common Loon
8	Yellow-billed Loon
10	Arctic Loon (Pacific)
